

VSCODE CONFIGURATION

1 INSTALLING \LaTeX

Go to the \TeX user group, download the version of texlive for your system and follow the instructions to install it. You might need to add the bin folder to your system's path.

2 INSTALL POLYTECHNIQUE'S PACKAGE

Go to the package's gitlab and download the files (via the git utility or the download button). Run the script corresponding to your system type in the `install` folder. You need `rsync` to run it on a Unix machine.
